

Directions for use:

1. Insert 3"x5" Super Body Warmers into Shield Pouches

3. Insert pouches into the six pockets in the Armor Shirt. Make sure they go all the way down.

2. Fold over the triple fold closure. Make tight folds to ensure good water seal

Temperature: Warmer Conversion Chart (estimate)

$< 40^{\circ} = 6$ POUCHES

$40^{\circ} - 45^{\circ} = 5$ POUCHES

$45^{\circ} - 50^{\circ} = 4$ POUCHES

$50^{\circ} - 60^{\circ} = 2$ POUCHES

-For optimal performance The Neptune System should be worn as your base layer. If you choose any additional layering please wear those items OVER your Neptune. In addition, should you place anything else in the shirt pockets make sure that it is not in between the pouch and your skin.

-While wearing a wetsuit or any other tight fitting clothing, occasionally "fluffing" the front of it will help get added Oxygen to the warmers and increasing the amount of heat generated.

-See Temperature Guide for an estimate on the number of pouches to use. This will vary greatly from person to person and depending on the environment.

Neptune Performance Products LLC Warranties against any manufacturer defect, but not again active wear and tear or misuse.

Warning!!!! You must use the Shield Pouches EVERY time you utilize the body warmers in the Neptune System. Failure to do so could result in your sustaining burns from the body warmers. Neptune Performance Products LLC is not responsible for injuries sustained during improper use.

The Neptune Thermoregulation System is not just a regular piece of athletic apparel. In order to ensure the best performance from the system one must use this tool correctly as well as take proper care of it so that it hold up under the conditions in which active individuals will be using it. Please read through these care instructions as well as the directions for use on the opposite side, and follow them accordingly.

Product Care

The Shield pouches were specifically designed to be both breathable and waterproof. This special fabric also needs to easily transfer heat for the body warmer inside to the outside and to your body. Unfortunately, this combination compromised their durability. It will for this reason that it is recommended that you **NOT** place anything other than the body warmers inside the pouches. Their waterproof inner liner can be easily scratched by any hard materials place inside which could compromise the pouches' ability to keep water out.

Also, care needs to be taken when opening and closing the pouches; again because any damage to the stitching could compromise its waterproof capabilities.

Shield Pouches

Armor Shirt

The Neptune Armor Compression Shirt's 4 way stretch fabric has a Durable Water Repellent (DWR) applied to it in order to help it shed water as quickly as possible. Unfortunately, washing the shirt decreases the effectiveness of the DWR. Applying Nikwax TX.Direct Spray or a similar product will revive its ability to shed water so consider using one of these once performance decreases.

In addition, constant friction on the fabric like that caused by a backpack or harness will cause excessive wear of the material in that area.

Laundry Instructions for both the Shield Pouches and the Armor Shirt:

Wash in cold water and line dry out of direct sunlight. Do not use fabric softener, not bleach on this product.
